Introduction

Reduced serum and serum-free cell culture conditions are rapidly becoming requirements for state of the art research. Corning Nu-Serum growth medium supplements provide low protein alternatives to newborn calf, fetal bovine, and other sera routinely used for cell and tissue culture.

While serum played an irreplaceable role in the early development of the ability to culture cells and tissues, it is now known that the high protein content of serum can complicate protein purification, virus production, purification and concentration, and the production and screening of monoclonal antibodies.

In comparison to standard Fetal Bovine Serum (FBS), Nu-Serum growth medium supplements are a more cost-effective method, providing the same results as a 1:1 replacement for FBS. Nu-Serum replacements have been used successfully on a large variety of human and animal cell types, many of which were previously difficult to grow.

Nu-Serum and Nu-Serum IV Features

- Full volume replacement for FBS
- Cost-effective alternative to FBS
- Facilitates protein purification, virus production, monoclonal antibody product and screening, similar to classical FBS. It increases the frequency of successful transfection of cells.
- Filtered (0.2 µm membrane)
- Supports a large variety of human and animal cell types including:
  - Human and chick embryo fibroblasts
  - HeLa cells
  - Mouse L cells
  - HepG2 Human hepatocellular carcinoma cells
  - BALB/c3T3 cells
  - Cos cells normal rat kidney cells
  - Human respiratory epithelial cells
  - Rat and chick neurons
  - Osteoblasts and primary chondrocytes
  - Human bladder carcinoma cells
  - Human melanomas
  - Hybridomas derived from Sp/2 and NS-1 myelomas
Potential savings using Corning® Nu-Serum™ as a replacement for FBS

Assumptions: Medium costs of $15/500 mL bottle; premium fetal bovine serum from USDA approved countries costs of $250/500 mL bottle. Each time a 500 mL bottle is used with a range of 5-10% supplementation, there are significant savings to the customer.

At Corning, cells are in our culture. In our continuous efforts to improve efficiencies and develop new tools and technologies for life science researchers, we have scientists working in Corning R&D labs across the globe, doing what you do every day. From seeding starter cultures to expanding cells for assays, our technical experts understand your challenges and your increased need for more reliable cells and cellular material.

It is this expertise, plus a 160-year history of Corning innovation and manufacturing excellence, that puts us in a unique position to offer a beginning-to-end portfolio of high-quality, reliable cell culture consumables.
